

ChatGPT UI aur Settings

Har screen, har setting ka use — step-by-step Hinglish guide

Zaroori note: ChatGPT ka interface bahut jaldi badalta hai. Ye guide September 2026 ki public jaankari (OpenAI Help Center aur tech guides) par based hai. Aapke plan (Free, Go, Plus, Pro, Business, Enterprise/Edu), device (Web, Desktop, iOS, Android) aur region ke hisaab se kuch options ka naam, jagah ya availability alag ho sakti hai. Agar koi option na dikhe to wo aapke account ke liye abhi available nahi hai — ye normal hai.

Is guide mein kya hai

Part	Topic
Part 1	Main UI: sidebar, top bar, message box (composer), reply ke buttons
Part 2	Settings ki har screen: General, Notifications, Personalization, Apps, Schedules, Data controls, Security, Parental controls, Account
Part 3	Naya Desktop app (Chat / Work / Codex) aur Mobile app
Part 4	Recommended settings checklist, shortcuts aur common problems

Part 1 — Main screen (Web: chatgpt.com)

ChatGPT kholte hi screen teen hisson mein bati hoti hai: **left mein Sidebar**, **upar Top bar**, aur **beech mein chat area** jiske neeche message likhne ka box (composer) hota hai.

1.1 Sidebar (left side)

Option	Kya karta hai / kab use karein
New chat	Bilkul naya, khaali conversation shuru karta hai. Har naye topic ke liye naya chat kholna best hai — purana context mix nahi hota.
Search chats	Purane chats mein keyword se dhoondhne ke liye. Title aur content dono mein search hota hai.
Library / Images	Aapke chats mein upload ki gayi ya ChatGPT ki banayi files aur images ek jagah. Purani image dobara nikalni ho to yahan dekhein.
Projects	Related chats, files aur instructions ka folder. Project banakar usme files daalein, apps connect karein aur Project settings mein sirf us project ke liye instructions/memory set karein. Lambe kaam (thesis, business, coding) ke liye best.
GPTs	Custom GPTs browse, use ya khud banane ke liye (Explore GPTs / Create). Kisi specific kaam ke liye pehle se tayyar assistant.
Work tab	July 2026 mein aaya naya mode. Chat jawab deta hai, Work poora deliverable banata hai — plan dikhata hai, phir document, spreadsheet, presentation, report ya website bana kar deta hai. Plan ke hisaab se available.
Codex	Coding ke liye OpenAI ka agent — repositories, code likhna/fix karna. Desktop app mein iska alag section hai.
Recents (chat list)	Aapke purane chats. Har chat par hover karke ... (teen dots) se: Share, Rename, Pin, Move to project, Archive, Delete.
Profile menu (neeche left)	Apne naam/photo par click karein: Settings, Upgrade plan, Personalization, Help, Log out. Settings ki saari screens yahin se khulti hain.

1.2 Top bar

Option	Kya karta hai / kab use karein
Model picker	Upar left mein model ka naam (jaise GPT-5.x). Click karke Instant (tez) ya Thinking (gehri soch) jaisa option chunein. Free/Go users ko poora picker nahi milta — unhe Thinking toggle jaisa simple option dikh sakta hai.
Chat / Work toggle	Normal baat-cheet (Chat) aur bade task (Work) ke beech switch.
Temporary chat	Aisa chat jo history mein save nahi hota, memory use/update nahi karta, aur training mein use nahi hota. Private sawaal ke liye. Agar aap temporary chat ko save kar dein to wo normal chat ban jaata hai.
Share	Chat ka public link banata hai. Link wale koi bhi use padh sakta hai — private info wale chat share na karein. Baad mein Data controls se link delete kar sakte hain.

1.3 Composer (message likhne ka box)

Option	Kya karta hai / kab use karein
+ (Attach)	Photo, PDF, Word, Excel, CSV upload karein; Google Drive / OneDrive jaise connected apps se file layein.
Tools menu	Plan ke hisaab se: Create image (image banana), Web search (taaza jaankari), Deep research (kai sources padhkar detailed report), Study mode (seedha jawab ke bajaye hints dekar sikhata hai), Canvas (lambe document/code ko side mein edit karna), Agent mode (browser chala kar kaam karna).
Mic icon	Bol kar type karna (dictation) — aapki awaaz text ban jaati hai.
Voice icon	Live voice conversation — ChatGPT bol kar jawab deta hai.
@ aur \$	Composer mein @ se context (file/app) add aur \$ se skill chunne ka option (naye desktop/mobile builds mein).
Enter / Shift+Enter	Enter = message bhejin. Shift+Enter = nayi line.

1.4 Har jawab ke neeche ke buttons

Option	Kya karta hai / kab use karein
Copy	Jawab copy karta hai (formatting ke saath).
Thumbs up / down	Feedback dene ke liye. Neeche wale se galti report kar sakte hain.
Try again / Regenerate	Wahi sawaal dobara, naya jawab. Kai versions mein aap model bhi change kar sakte hain.
Read aloud	Jawab ko awaaz mein sunata hai.
Edit (aapke message par)	Apna pichla message pencil icon se edit karein — conversation wahan se nayi branch ban jaati hai.
Branch in new chat	Kisi jawab se ek alag naya chat shuru karna, taaki original chat kharab na ho.

Part 2 — Settings ki har screen

Settings kholne ka tareeka: **Web/Desktop** par neeche-left apne naam/photo par click karke **Settings**. **Mobile** par sidebar kholein aur apne naam/profile par tap karein. Left side mein tabs dikhenge — neeche har tab ko alag se samjhaya gaya hai.

2.1 General

Rasta: Profile → Settings → General

Option	Kya karta hai / kab use karein
Theme	System (phone/PC ke hisaab se), Dark ya Light. Raat mein zyada use karte hain to Dark aankhon ke liye aaraam deta hai.
Accent color	Buttons/highlights ka rang badalne ke liye.
Language	ChatGPT ke menus ki bhasha (Auto-detect ya koi specific bhasha, jaise Hindi). Isse jawab ki bhasha nahi badalti — wo aap jis bhasha mein likhenge usme aayega.
Spoken language	Voice/dictation ke liye aapki boli jaane wali bhasha. Hinglish bolte hain to Auto-detect rakhein ya galat samjhe to Hindi/English fix karein.
Voice	Voice mode mein ChatGPT ki awaaz chunne ke liye (Play karke sun sakte hain). Kuch versions mein ye alag 'Speech/Voice' tab mein hota hai.
Follow-up suggestions	Jawab ke baad agla sawaal suggest karne wale chips on/off.
Show code / other display options	Kuch versions mein code blocks, 'Always show code when using data analyst' jaise display toggles yahan milte hain.

2.2 Notifications

Rasta: Profile → Settings → Notifications

Yahan tay karein ki ChatGPT aapko kab aur kaise (push, email) bataaye. Aam options: lambe tasks (Deep research, Work, image generation) poore hone par notification, Scheduled tasks ke results, aur product updates. Jo notifications distract karte hain unhe band kar dein, lekin lambe task wale on rakhna useful hai.

2.3 Personalization (sabse important)

Rasta: Profile → Settings → Personalization (ya Profile menu → Personalization)

Option	Kya karta hai / kab use karein
Base style / Personality	ChatGPT ka default andaaz — jaise Default, Friendly, Professional, Efficient/Concise, Candid, Quirky (naam version ke hisaab se alag ho sakte hain).
Characteristics	Barik controls: Warmth (kitna garamjoshi), Enthusiasm (josh), Emoji (kitne emoji), Headers & lists (formatting kitni). Ye settings har naye chat par apne aap lagti hain.
Custom instructions	Har chat mein lagne wale permanent nirdesh. Jaise: 'Hamesha Hinglish mein jawab do', 'Chhote points mein samjhao', 'Main B.Com student hoon'. Sabhi devices par sync hote hain.
About you / Nickname / Occupation	Aapka naam, kaam aur interests — taaki jawab aapke hisaab se ho.

Option	Kya karta hai / kab use karein
Memory: Reference saved memories	ChatGPT aapki batayi important baatein yaad rakhta hai (jaise 'mujhe vegetarian recipes chahiye'). Off karne par naye memories na banenge na use honge.
Memory: Reference chat history	Purane chats se context lekar jawab dena. Privacy chahiye to ise off kar sakte hain.
Manage memories	Saari saved memories dekhein, galat ya private wali delete karein. Ise samay-samay par check karte rahein.
Advanced	Kuch versions mein yahan Web search, Canvas, Voice, Code jaise features ko globally on/off karne ke toggles hote hain.

Tip: Memory aur training alag cheezein hain. Memory off karne se aapka data training se nahi hatta — uske liye Data controls mein 'Improve the model for everyone' off karna padta hai.

2.4 Apps (Connectors)

Rasta: [Profile](#) → [Settings](#) → [Apps](#) (pehle 'Connectors' ya 'Connected apps' naam tha)

Google Drive, Gmail, Google Calendar, OneDrive/SharePoint, GitHub, Slack, Notion jaisi services ko ChatGPT se jodne ke liye. Connect karne ke baad ChatGPT in apps se files padh sakta hai ya search kar sakta hai. Yahan se kisi app ko **Disconnect** bhi kar sakte hain. Business plans mein 'Company knowledge' se ChatGPT connected apps mein search karke citations ke saath jawab deta hai. Sirf wahi apps connect karein jinki sach mein zaroorat ho.

2.5 Schedules (Scheduled tasks)

Rasta: [Profile](#) → [Settings](#) → [Schedules](#) (ya sidebar mein [Scheduled tasks](#))

ChatGPT se kisi kaam ko fixed time par apne aap karwana — jaise 'har subah 8 baje aaj ki news summary do' ya 'har Monday weekly plan bhejo'. Yahan saare scheduled tasks dikhte hain; inhe pause, edit ya delete kar sakte hain. Note: kisi purane model (jaise GPT-5.5, jo 14 October 2026 ko retire ho raha hai) par set tasks ko naye model par update kar lein.

2.6 Data controls (privacy ka control room)

Rasta: Profile → Settings → Data controls

Option	Kya karta hai / kab use karein
Improve the model for everyone	On ho to aapke chats OpenAI ke models ko train karne mein use ho sakte hain. Off karein to naye chats training mein use nahi honge (history mein fir bhi dikhenge). Poore account par lagta hai, ek baar karna kaafi hai. Personal plan par Codex tasks par bhi lagta hai.
Remote browser data	Agent mode jo virtual browser use karta hai uska data (cookies/logins) delete karne ke liye.
Shared links → Manage	Aapne jo bhi chats share kiye unki list. Galti se share hua link yahan se delete karein.
Archived chats → Manage	Archive kiye chats dekhne/wapas laane ke liye. Archive = sidebar se hatana, delete nahi.
Archive all chats	Saare chats ek saath archive — sidebar saaf ho jaata hai, data bacha rehta hai.
Delete all chats	Saare chats hamesha ke liye delete. Wapas nahi aate — soch-samajh kar use karein.
Export data	Aapke saare chats aur account data ki copy email par (zip file). Backup ya account delete karne se pehle karein.

Business, Enterprise, Edu workspaces ka data by default training mein use nahi hota; wahan admin ki policies bhi lagti hain.

2.7 Security

Rasta: Profile → Settings → Security

Option	Kya karta hai / kab use karein
Multi-factor authentication (MFA)	Password ke saath doosra step — Authenticator app code, SMS ya security key. Account ko hack se bachane ke liye zaroor on karein.
Passkeys / Security keys	Fingerprint/Face ID ya hardware key (FIDO, jaise YubiKey) se login — phishing se sabse mazboot suraksha.
Active sessions	Kaun-kaun se device/browser par aap logged-in hain — device, lagbhag location aur time dikhta hai. Anjaana device dikhe to uske saamne Log out.
Log out of all devices	Active sessions mein 'Log out all' → confirm. Saare devices se logout (current bhi); doosre devices par 30 minute tak lag sakte hain. Iske baad password badlein aur MFA on karein.
Device code login (Codex)	Codex CLI ko terminal mein login karne ka alternative tareeka — sirf developers ke kaam ka.

Dhyan dein: Active sessions mein third-party apps, connected apps aur 'Sign in with ChatGPT' wali services nahi dikhti — unhe Apps tab ya us service mein alag se hatayein.

2.8 Parental controls

Rasta: Profile → Settings → Parental controls

Option	Kya karta hai / kab use karein
Add family member	Teen (13-17 saal) ko phone number ya email se invite karein. Teen accept kare to accounts link ho jaate hain. Ek parent kai teens link kar sakta hai, teen sirf ek parent se.
Quiet hours	Aise time set karein jab teen ChatGPT use nahi kar sakta (jaise raat 10 se subah 7). Kai time-blocks aur din chun sakte hain.
Study hours / Study mode	Tay samay par Study mode — seedha jawab ke bajaye sawaal aur hints.
Reduce sensitive content	Graphic, explicit ya umar ke hisaab se galat content kam karta hai. Teen accounts par default on.
Feature toggles	Memory, voice mode, image generation jaise features teen ke liye on/off, aur training mein data use hone ka control.
Safety notifications	Gambhir safety chinta (jaise self-harm ke sanket) trained reviewers confirm karein to parent ko email/SMS/push alert. Parent teen ke chats padh nahi sakta.
Unlink accounts	Koi bhi dono mein se unlink kar sakta hai; teen unlink kare to parent ko pata chalta hai.

2.9 Account

Rasta: [Profile](#) → [Settings](#) → [Account](#)

Option	Kya karta hai / kab use karein
Plan / Subscription	Current plan dekhna, Upgrade (Go, Plus, Pro), ya Manage/Cancel. Cancel karne par plan billing cycle ke end tak chalta hai.
Payment	Card/UPI (jahan available) badalna, invoices dekhna. App store se khareeda ho to cancel bhi wahin (Google Play / Apple) se hota hai.
Name & email	Profile ka naam, email aur linked login (Google, Apple, Microsoft).
GPT builder profile	Agar aap GPTs publish karte hain to aapka public naam/website verify karne ke liye.
Delete account	Account hamesha ke liye band. Pehle Export data kar lein aur subscription cancel karein.

2.10 Baaki tabs jo kuch accounts mein dikhte hain

Option	Kya karta hai / kab use karein
Speech / Voice	Voice chunna, background conversations (app band hone par bhi voice chalti rahe) jaise options.
Pets (Desktop)	Desktop app ka floating Quick Chat companion. Settings > Pets se chunein ya 'Mini' rakhein.
Workspace / Admin	Business/Enterprise mein admin ke controls — members, permissions, retention, apps.
Connections (Codex)	Codex ko phone se control karne wale devices, 'keep computer awake' jaise settings.

Part 3 — Desktop aur Mobile app

3.1 Naya ChatGPT Desktop app (macOS / Windows)

2026 mein OpenAI ne ChatGPT desktop app, Atlas browser aur Codex ko ek hi app mein mila diya (Atlas 9 August 2026 ko band ho gaya). Top-left menu se **ChatGPT** ya **Codex** chunein; ChatGPT ke andar upar toggle se **Chat** ya **Work**.

Option	Kya karta hai / kab use karein
Chat	Sawaal-jawab, search, normal baat-cheet.
Work	Research, analysis, aur documents / spreadsheets / presentations / reports / Sites banana.
Codex	Local files, repositories aur terminal ke saath software development.
Recents	Chat aur Work dono ke chats ek saath; sort, filter aur pin kar sakte hain.
Projects	Purane ChatGPT Projects yahan bhi; project ke andar Chat ya Work shuru karein.
Quick Chat	macOS par Option+Space, Windows par Windows+Alt+P — kisi bhi app ke upar se sawaal poochein.
ChatGPT Classic	Purana desktop app agar naye ke saath install reh gaya ho.

Kuch settings (jaise training opt-out wala Data controls) naye desktop app mein na milein to **chatgpt.com** web par jaakar badlein — account-level setting hai, har jagah lag jaati hai.

3.2 Mobile app (Android / iOS)

Option	Kya karta hai / kab use karein
Sidebar	Upar-left menu icon (do lines) se chats, Projects, GPTs, Library.
Settings	Sidebar mein neeche apne naam par tap karein. Tabs web jaisi hi hain.
Voice & Camera	Voice icon se live baat; camera se photo khinch kar sawaal (jaise homework, bill, plant pehchan).
Remote Codex/Work	Computer par chal rahe Codex/Work task ko phone se dekhna, approve ya redirect karna.
Haptics / Widgets	App settings mein vibration feedback; home screen widget aur lock-screen shortcut (device par depend).

Part 4 — Checklist, shortcuts aur problems

4.1 Recommended settings (5 minute setup)

Step	Kya karein
1. Security	MFA on karein; Active sessions check karein.
2. Data controls	Privacy chahiye to 'Improve the model for everyone' off.
3. Personalization	Custom instructions likhein (bhasha, level, style).
4. Memory	Manage memories kholkar galat/private cheezein delete karein.
5. Shared links	Purane public links hataayein.

Step	Kya karein
6. Theme	Apni pasand ka Light/Dark.
7. Parents	Teen ho to Parental controls link karein, Quiet hours set karein.

4.2 Keyboard shortcuts (Web)

Shortcut	Kaam
Ctrl/Cmd + Shift + O	Naya chat
Ctrl/Cmd + Shift + S	Sidebar show/hide
Ctrl/Cmd + Shift + C	Aakhri jawab copy
Shift + Enter	Nayi line (bina bheje)
Ctrl/Cmd + /	Saare shortcuts ki list

4.3 Common problems

Problem	Hal
Koi setting/feature nahi dikh raha	Plan, region ya device par depend karta hai. App update karein, web par check karein, ya Help Center dekhein.
Jawab galat bhasha mein aa raha	Custom instructions mein bhasha likhein; General > Language sirf menus ki bhasha badalta hai.
ChatGPT purani galat baat yaad rakh raha	Personalization > Manage memories se delete karein, ya chat mein bolein 'ye bhool jao'.
Chat gayab ho gaya	Data controls > Archived chats check karein, ya Search chats use karein.
Account par shak (hack)	Log out of all devices → password badlein → MFA on → OpenAI support se sampark.
Subscription cancel nahi ho raha	Jahan se khareeda (web, Google Play, Apple) wahin se cancel karein.

Sabse taaza aur official jaankari ke liye: help.openai.com aur learn.chatgpt.com (What's new) dekhein.
